After y'all directed LWG to assess them at the individual level, they sent back a response with a description of how they intended to assess them as directed, so the question is did y'all ever respond to them and did you have any concerns about their proposed approach. I think Yakama and the 5 tribes sent a letter to you with outlining some concerns over LWG's proposal for assessment at the individual level so we're trying to figure out if those have been addressed. Does that help?
